

Iven Yang

+1 859 519 8578 - iy332@nyu.edu - <https://www.linkedin.com/in/i-yang-g> - github.com/iven-yang

SUMMARY

- 8 years of software engineering industry experience
- Quick learner with experience working on complex projects in a team setting

TECHNICAL SKILLS

Programming Languages: Python, PHP, Javascript, Go, SQL, C++

Frameworks: React.js, Flask, Android

Tools: Apache Kafka, Git, Jenkins, Docker, Ansible

EXPERIENCE

Meta Platforms

September 2024 – Present

Software Engineer

Menlo Park, CA

- Built internal tools to automate global risk and control inventory management, improving accuracy and compliance
- Improved change management processes and closed gaps in governance and documentation
- Independently addressed multiple bugs and SEVs in the Risk and Controls team. Mentored new engineers for oncall tasks
- Planned all social events for the team, increasing team morale during a period of accelerated delivery timelines.
- Drove ~2M annual increase in Facebook-Instagram account linking growth (~\$2M annual revenue impact) by testing different account linking upsells and flows for users

Millennium Management

June 2021 – July 2024

Systematic Operations Engineer

New York, NY

- Built internal software for systematic trading, including order monitoring, metrics pipelines, logging APIs, and microservices
- Processed millions of orders daily using Kafka and TimescaleDB, automated testing and CI/CD with Ansible and Jenkins
- Implemented data visualization pipelines for trading teams using Kafka Connect and ELK stack
- Reduced SLA response times on alerts from ~10m to under 1m. Enabled trading support teams to contact brokers faster

Bank of New York Mellon

June 2018 – June 2021

Software Engineer

New York, NY

- Built and deployed a Python order execution service with a web API and parallel workers in a high-availability cloud env
- Implemented CI/CD pipelines using Jenkins to run e2e testing and help enforce good engineering practices
- Enabled automated provisioning of applications and operational tasks (e.g., database failover and provisioning)
- Delivered automated self-service MongoDB provisioning as Team Lead, reducing provision times by over 90%
- Collaborated with database engineers as team lead. Tested automated DB failover scenarios, ensuring no downtime for users

Opentext

May 2017 – May 2018

Software Engineer Intern

Lexington, KY

- Collaborated to design and build a Python-based automation framework
- Developed and maintained automated tasks and tests executed in nightly regression (Jenkins, vCloud)
- Enabled our QA users to migrate and create 300+ regression tests and tasks using the framework

EDUCATION

New York University

2014 – 2018

Bachelor of Science in Computer Science

Minor in Applied Physics
